### Description:

**Green Shell Mussel Powder (GSMP)** for horses is a nutritional supplement produced from pure *Perna Canaliculus*, a filter-feeding sea mussel grown in New Zealand containing all nine classes of glycosaminoglycans. Glycosaminoglycans (GAGs) are synthesised locally in the horse's body. They are essential to health as are vitamins, minerals, enzymes and essential fatty acids. (GAGs) have been referred to as the "glue of life". As all horses mature, (GAGs) can dry out or become displaced.

The (GSMP) also provides highly concentrated and synergistic components of protein, naturally chelated minerals, vitamins, nucleic acids and enzymes. All of the 40 nutrients necessary for cell regeneration are found naturally in (GSMP). It is considered a whole-food supplement that provides a biologically balanced combination of nutrients for connective tissue support.

(GSMP) has exceptional ability to aid the body in halting the progressions of joint and connective tissue problems as well as promoting the regeneration and healing of arthritic and injured joints.

(GSMP) provides natural anti-inflammatory agents and many essential building blocks needed to rebuild the collagen, proteoglycans and synovial fluid found in joints, ligaments and tendons.

### Suggested use:

It is recommended to serve 4.3gm of Green Shell Mussel powder to your desired horse formulation. A minimum of two servings (8.6gm) and up to four servings (17.2gm) per day as required for two weeks. Then reduce to one or two servings per day. Multiple servings should be given in divided dosages if possible.

Natural products such as Alfalfa, Cinnamon oil, Caramel, Sorbitol can be added to enhance the palatability of (GSMP) into your horse's diet.

In order to obtain results with (GSMP), it is of extreme importance to follow the recommended feeding program with regard to both duration and supplement levels.
